

AHMAD SOHAIL WAHIDY

Junior Software Developer | Full-Stack Web & Database Systems

Afghanistan | wahidysohail@gmail.com | [linkedin.com/in/ahmadsohailwahidy](https://www.linkedin.com/in/ahmadsohailwahidy) | github.com/ahmadsohailwahidy

PROFESSIONAL SUMMARY

Final-year Computer Science & Informatics Engineering student focused on full-stack web applications, frontend engineering, and database-driven systems. Project work demonstrates React/Next.js/TypeScript interfaces, Node.js/Express REST APIs, PostgreSQL/MySQL data modeling, role-based workflows, and Python ETL/data warehouse development. Builds structured, responsive software with maintainable component and data boundaries.

TECHNICAL SKILLS

Frontend: TypeScript, JavaScript, React, Next.js, HTML5, CSS3, CSS Modules, responsive web design, web accessibility

Backend & APIs: Node.js, Express.js, REST APIs, JWT authentication, role-based access control (RBAC)

Databases: SQL, PostgreSQL, MySQL, MongoDB, relational modeling, ERD, normalization, stored procedures, views, triggers

Supporting: Python for ETL/data workflows, Java, JDBC, Git, GitHub

SELECTED PROJECTS

Final Year Project Management System — *Full-Stack Web Application* | React, Node.js, Express.js, PostgreSQL/MongoDB, JWT

- Built a role-aware workflow for Admin, Student, Supervisor, and Evaluator users covering proposals, assignments, milestones, document uploads, evaluations, presentation scheduling, and publication.
- Implemented frontend/backend integration, REST APIs, database access, validation, file handling, dashboards, bcrypt/JWT authentication, RBAC, and active-account controls across PostgreSQL and MongoDB variants.

Personal Developer Portfolio — *Frontend Engineering* | Next.js, React, TypeScript, CSS Modules

- Developed a modular portfolio with typed content models, reusable components, responsive layouts, Next.js image/font handling, and server-side GitHub repository metadata with fallback behavior.
- Implemented custom interactions with React hooks/reducers, IntersectionObserver, requestAnimationFrame, keyboard/focus handling, and reduced-motion support under strict TypeScript and Next.js ESLint settings.

Online Food Ordering Database Design — *Team Project* | MySQL, SQL, ERD, 3NF

- Designed a normalized relational model spanning users/roles, restaurants, menus, food items, orders, payments, delivery, reviews, loyalty, and status/price history.
- Implemented stored procedures, views, triggers, and analytical queries for ordering workflows, validation, history tracking, revenue, customer value, item popularity, delivery performance, and order status.

AI Intelligence Data Warehouse & Business Intelligence — *Team Project* | PostgreSQL, Python, Psycopg2, Flask, Chart.js

- Built Python ETL using Requests, JSON, and Psycopg2 to prepare Hugging Face API data plus supplied datasets and load a PostgreSQL star schema with five dimensions and six fact tables.
- Developed analytical dashboards for AI model adoption, human preference, benchmark performance, categories, and company influence using KPIs such as downloads, likes, votes, Elo ratings, and benchmark scores.

EDUCATION

Undergraduate - Computer Science & Informatics Engineering (Information Systems) | 2022-Present

Faculty of Computer Science & Informatics | Information Systems Department

Final-year undergraduate; seventh semester. Relevant study areas: information systems, database/data modeling, software development, and web application development.

LANGUAGES

Persian (Dari) — Native | Pashto — Fluent | English — Professional Working Proficiency
